1. Application Overview & Key Features

Liqueo is an intelligent knowledge management system designed for financial and business consultants. It leverages semantic search and AI-powered insights to help consultants quickly discover relevant past engagements, extract learnings, and apply them to current client situations. The system supports multiple operating modes to accommodate different API availability scenarios, ensuring consultants can always benefit from knowledge reuse regardless of their technical setup.

Core Capabilities:

- **Document Management:** Add engagements with full metadata (title, industry, transaction type, value, duration)
- **Semantic Search:** Find similar past engagements using AI embeddings for deeper relevance
- **Intelligent Recommendations:** Get suggested approaches based on industry patterns and past successes
- **Knowledge Synthesis:** Generate insights and summaries from engagement collections
- **Industry Analysis:** Analyze trends, common challenges, and success factors by industry
- **Flexible Deployment:** Works with OpenAI, Anthropic APIs, or in keyword-only mode

2. Home & Navigation

The Liqueo home screen serves as your central hub for accessing all knowledge management features. The application provides an intuitive navigation bar with tabs for each major function, along with a clear version indicator and professional branding.

Home Screen Interface

Figure 2.1: Liqueo Home Screen

The main dashboard displays the application title, tagline ('Knowledge Discovery & Reuse for Financial Consultants'), and navigation to key modules. The version indicator (v1.0.0) tracks application releases.

Each navigation tab provides a dedicated workspace for specific tasks. The clean, professional interface ensures consultants can quickly move between functions without confusion.

3. Adding Engagements to Knowledge Base

The 'Add New Engagement' module allows you to store consulting engagements, case studies, and project documentation. This is where your organizational knowledge is captured and indexed for later retrieval and analysis.

3.1 Engagement Details Section

Start by entering the core metadata about your engagement. This structured information helps the system categorize and search documents effectively.

Industry Analysis

Select Industry

tech

Analyze Trends

INDUSTRY ANALYSIS: tech

1. INDUSTRY TRENDS:

• Active market with 2 engagements on record • Average engagement value: \$0.6M

2. COMMON CHALLENGES:

• Change management and stakeholder alignment

3. SUCCESS FACTORS:

• Structured analytical approach • Stakeholder engagement strategy

4. FUTURE OUTLOOK:

• Engagements typically span 5-7 months • Continued focus on operational and digital transformation • Increased emphasis on sustainability and ESG considerations

Note:

Analysis based on metadata. LLM synthesis not available.

Activate Windows

Figure 3.1: Add Engagement Form - Engagement Details

This section captures essential engagement metadata:

- **Engagement Title:** Clear name describing the engagement (e.g., 'SaaS Acquisition')
- **Industry:** Sector classification (e.g., Technology, Finance, Healthcare)
- **Transaction Type:** Type of work performed (M&A, Restructuring, Due Diligence, etc.)
- **Engagement Value:** Dollar amount of the engagement for impact assessment
- **Duration:** Timeline in months to track project scale
- **Client Name:** Reference for context and confidentiality tracking

Pro Tip: Use consistent industry and transaction type values to improve search accuracy. The system recognizes standard consulting classifications.

3.2 Content Upload & Import

After entering engagement details, add the content that documents the work. Liqueo supports multiple formats:

- **Supported File Formats:** PDF, Word (.docx), Excel (.xlsx), CSV, and plain text files
- **Upload Local Files:** Click 'Upload Local Files' to select files from your computer
- **Download from URL:** Provide links to documents stored in OneDrive, SharePoint, or other cloud services
- **Multiple Uploads:** Add multiple files per engagement to capture comprehensive documentation

Add New Engagement

 Upload Local Files

 Download from URL

Activate Windows
Go to Settings to activate Windows.

Supported: PDF, Word, Excel, CSV, Text

OneDrive, SharePoint, etc.

Figure 3.2: Add Engagement Form - Content Upload Options

Choose between local file upload or URL import. The system processes documents asynchronously to ensure the interface remains responsive.

Workflow: Complete engagement details → Add content files → Submit. The system automatically extracts text from documents, generates semantic embeddings, and indexes them for search.

4. Searching the Knowledge Base

The search module is where consultants discover relevant past engagements. It combines multiple search methodologies to ensure you find the most relevant information, whether using natural language queries or specific keywords.

Add New Engagement

Engagement Details

Engagement Title *	Engagement Value (\$M)
e.g., SaaS Acquisition	0.00 - +
Industry *	Duration (months)
e.g., Technology	1 - +
Transaction Type	Client Name
e.g., M&A, Restructuring	e.g., ABC Corporation

Add Content

Choose one: Type details below OR upload files/URLs

 Upload Local Files

 Download from URL

Go to Settings to activate Windows.

Supported: PDF, Word, Excel, CSV, Text OneDrive, SharePoint, etc.

Figure 4.1: Search Knowledge Base Interface

The search interface provides multiple controls for targeted queries:

- **Search Query:** Enter natural language questions or keywords (e.g., 'app development strategy')
- **Top Results Slider:** Adjust result count from 1-5 matches to control result volume
- **Industry Filter:** Optionally filter results by specific industry to narrow scope
- **Search Results:** Displays ranked matches with relevance scores and metadata

4.1 Understanding Search Results

Each search result displays:

- **Title & Industry:** Engagement name and industry classification
- **Value & Duration:** Financial scope and project timeline
- **Client Name:** Organization worked with
- **Relevance Score:** Percentage indicating match quality (100% = perfect match)
- **View Button:** Access full engagement details and content

Search Tips:

- ✓ Use descriptive queries: 'digital transformation in healthcare' vs. 'digital'
- ✓ Try multiple queries if first results don't match expectations
- ✓ Use industry filters to focus on sector-specific knowledge

✓ Higher relevance scores indicate better matches

5. Industry Analysis & Trends

The Industry Analysis module synthesizes knowledge across your entire knowledge base to identify patterns, common challenges, and success factors specific to each industry.

Industry Analysis

Select Industry

tech

Analyze Trends

 INDUSTRY ANALYSIS: tech

1. INDUSTRY TRENDS:

• Active market with 2 engagements on record • Average engagement value: \$0.6M

2. COMMON CHALLENGES:

• Change management and stakeholder alignment

3. SUCCESS FACTORS:

• Structured analytical approach • Stakeholder engagement strategy

4. FUTURE OUTLOOK:

• Engagements typically span 5-7 months • Continued focus on operational and digital transformation • Increased emphasis on sustainability and ESG considerations

 Note:

Analysis based on metadata. LLM synthesis not available.

Activate Windows

Figure 5.1: Industry Analysis Dashboard

Select an industry and click 'Analyze Trends' to generate comprehensive industry insights:

- **Industry Trends:** Current market activity and engagement patterns
- **Common Challenges:** Recurring issues identified in your engagement history
- **Success Factors:** Proven approaches and best practices
- **Future Outlook:** Predicted evolution and emerging opportunities

Example Analysis Output:

Technology Industry:

- Active market with 2 engagements, \$0.6M average value
- Common challenges: Change management and stakeholder alignment
- Success factors: Structured analytical approach + strong stakeholder engagement strategy
- Future outlook: 5-7 month engagements with focus on operational and digital transformation

6. System Architecture & Operating Modes

Layer	Components	Function
Presentation	Streamlit Web UI CLI Interface	User interaction and navigation
Business Logic	Workflow Engine Recommendation Engine	Knowledge orchestration
Service Layer	Embeddings Manager LLM Integration	Semantic search and synthesis
Data Layer	Document Model JSON Storage	Persistence and retrieval

Operating Modes

Full Mode (Recommended): Both OpenAI and Anthropic APIs available. Provides semantic search via embeddings and AI-powered synthesis for maximum capability and insight quality.

Hybrid Mode: One API available (either OpenAI or Anthropic). Balances search capability with synthesis features. Suitable for organizations with single-vendor relationships.

Manual Mode: No APIs available. Uses keyword-based search only. Suitable for quick deployments or initial evaluations. All documents remain searchable by title and metadata.

7. Quick Start Guide

Get up and running with Liqueo in 5 steps:

Step 1: Installation

Clone the repository and install dependencies:

```
git clone https://github.com/hemalp143/Liqueo.git
cd Liqueo
pip install -r requirements.txt
```

Step 2: Configure APIs (Optional)

Create .env file with your API keys (or skip for manual mode):

```
OPENAI_API_KEY=your_key_here
ANTHROPIC_API_KEY=your_key_here
```

Step 3: Launch Web Interface

```
streamlit run app.py
```

Opens at <http://localhost:8501>

Step 4: Add First Engagement

Navigate to 'Add New Engagement' tab → Enter engagement metadata → Upload documents
→ Submit

Step 5: Search Your Knowledge Base

Go to 'Search Knowledge Base' tab → Enter query → View results → Click View for details

8. Best Practices & Tips

Document Organization:

- Use consistent naming conventions for engagements
- Include comprehensive metadata for better filtering
- Upload summary documents in addition to detailed files

Search Optimization:

- Write descriptive search queries in natural language
- Use industry filters to improve result relevance
- Adjust results slider to balance coverage and focus

Knowledge Reuse:

- Review industry analysis before client proposals
- Use recommendations to inform consulting approaches
- Tag successful strategies in engagement notes

API Configuration:

- Use Full Mode when available for best results
- Maintain fresh API keys with appropriate permissions
- Monitor API usage to manage costs

9. Troubleshooting & FAQs

Q: What file formats are supported?

A: PDF, Word (.docx), Excel (.xlsx), CSV, and plain text. The system extracts text from all formats automatically.

Q: How is search relevance calculated?

A: The system uses cosine similarity on semantic embeddings (when APIs available) or keyword matching (manual mode). Results are ranked 0-100% by relevance.

Q: Can I delete or update engagements?

A: Yes, navigate to engagement details and use the delete/edit options. Changes are immediately reflected in search results.

Q: How many documents can I store?

A: Single-machine deployment supports up to ~10,000 documents. For larger scale, consider vector database integration.

Q: What if APIs aren't available?

A: The system automatically falls back to Manual Mode with keyword search. All features remain available with reduced AI capability.

Q: How secure is the system?

A: Local deployment keeps all data on-machine. For sensitive data, implement encryption and access controls as needed.

Q: Can I export analysis results?

A: Yes, copy text from analysis results or implement export functionality using the generated JSON data.

Q: How do I improve search results?

A: Add more comprehensive documents, use descriptive metadata, and try different query phrasings. Fine-tune filters as needed.
