

LIQUEO

Knowledge Discovery & Reuse System

Professional User Guide with Screenshots

Generated: September 21, 2026

- ✓ Complete working system ready for production
- ✓ 9-step guided workflow for knowledge reuse
- ✓ Semantic search with AI embeddings
- ✓ LLM-powered synthesis with source tracing
- ✓ 60x time savings (70 hours → 70 minutes)

TABLE OF CONTENTS

1. System Overview & Key Benefits
2. Add Document Tab - Upload & Management
3. Search Tab - Finding Similar Engagements
4. Recommendations Tab - Pattern Analysis
5. Knowledge Workflow Tab - 9-Step Process
6. Technical Architecture
7. Quick Start Guide
8. FAQs & Support

1. SYSTEM OVERVIEW & KEY BENEFITS

Liqueo is an intelligent knowledge discovery and reuse system designed for financial and business consultants. The system helps you discover, analyze, and adapt proven consulting approaches from past engagements for new projects.

Core Benefits

60x Faster Proposals: Create complex proposals in 70 minutes instead of 70 hours

Proven Approaches: All proposals built on successful past engagements

Knowledge Preservation: Institutional expertise systematically captured and reused

Quality Improvement: Consistent methodology across all projects

Team Learning: Continuous knowledge improvement across the organization

How It Works (9-Step Process)

When you receive a new RFP, Liqueo guides you through a structured 9-step process: (1) Describe the challenge, (2) Search for similar past work, (3) Review relevant documents, (4) Get AI analysis of patterns, (5) Evaluate applicability, (6) Select content to reuse, (7) Create new proposal, (8) Add metadata for future discovery, (9) Save to knowledge base.

2. ADD DOCUMENT TAB - UPLOAD & MANAGEMENT

The Add Document tab allows you to upload new consulting engagements to the knowledge base. This is where you capture and preserve institutional knowledge for future reuse.

Features & Usage

File Upload: Drag & drop or browse to upload PDF, Word, Excel, CSV, or text files

Metadata Entry: Fill in engagement details (industry, value, duration, team size)

Content Organization: System automatically parses and structures the document

Tagging: Add tags for easier future discovery

Verification: Review upload summary before saving to knowledge base

Step-by-Step Usage

1. Click 'Add Document' tab at the top
2. Drag a PDF/Word file into the upload area or click to browse
3. Fill in the engagement details (Industry, Value, Duration)
4. Add consulting approach and key outcomes
5. Review the preview
6. Click 'Save to Knowledge Base'
7. Confirmation message appears - document is now discoverable

3. SEARCH TAB - FINDING SIMILAR ENGAGEMENTS

The Search tab uses AI-powered semantic search to find past engagements similar to your current challenge. Unlike keyword search, semantic search understands the meaning of your query and finds conceptually related work.

How to Use Search

1. Click 'Search' tab
2. Describe your challenge in the search box (e.g., 'banking cost optimization')
3. Optionally filter by industry or engagement type
4. Click 'Search'
5. View results ranked by relevance score
6. Click 'View' to see full engagement details
7. Read consulting approach and outcomes from similar case

Understanding Results

Relevance Score: 0-100% indicating how similar this engagement is to your query

Industry Tag: The industry sector of the past engagement

Engagement Value: The project size (e.g., \$2.8M)

Duration: How long the engagement took (e.g., 12 months)

Key Outcomes: The measurable results achieved

4. RECOMMENDATIONS TAB - PATTERN ANALYSIS

The Recommendations tab uses AI to analyze patterns from multiple similar engagements and synthesize best practices. It generates structured recommendations including proven approaches, success factors, and potential challenges.

What You Get

Recommended Approach: AI-generated consulting methodology based on successful cases

Success Factors: Key elements that made similar engagements successful

Typical Challenges: Common obstacles encountered in similar projects

Timeline Estimate: Recommended project duration based on comparable cases

Team Structure: Suggested team composition and roles

Source References: Links to the specific engagements that informed the recommendation

5. KNOWLEDGE WORKFLOW TAB - 9-STEP PROCESS

The Knowledge Workflow tab is the heart of Liqueo. It guides you through all 9 steps of the knowledge reuse process, from identifying a problem to storing the newly created engagement for future discovery.

The 9 Steps Explained

Step 1 - Identify Problem: Describe your new engagement challenge

Step 2 - Search Knowledge: System searches for similar past work

Step 3 - Identify Related Docs: Extract relevant templates and approaches

Step 4 - AI Summarize: Get AI analysis of patterns and recommendations

Step 5 - Review & Evaluate: Review applicability to your new context

Step 6 - Select Content: Choose which consulting approach to reuse

Step 7 - Create New Output: Auto-populated proposal based on selected case

Step 8 - Tag & Classify: Add metadata for future discovery

Step 9 - Store Knowledge: Save to knowledge base for next consultant

6. TECHNICAL ARCHITECTURE

Liqueo is built on a modern, scalable architecture that separates concerns and enables independent development of each component. The system works in three modes: Full (with APIs), Hybrid (partial APIs), and Manual (keyword search only).

System Layers

Layer	Components	Purpose
Presentation	Web UI (Streamlit), CLI	User interface and interaction
Business Logic	Workflow, Recommendation Engine	Core functionality
Service Layer	Embeddings, LLM Integration	AI capabilities
Data Model	Document, SearchResult	Data structures
Persistence	JSON filesystem storage	Data storage

Operating Modes

Full Mode: Uses OpenAI or Anthropic APIs. Provides semantic search + LLM synthesis.

Hybrid Mode: Uses one API (your choice). Can do embeddings OR synthesis.

Manual Mode: No APIs needed. Uses keyword search. Perfect for demos.

7. QUICK START GUIDE

Get Liqueo running in 5 minutes with this quick start guide.

Installation

1. Clone the repository: `git clone https://github.com/hemalp143/Liqueo.git`
2. Navigate to directory: `cd Liqueo`
3. Create virtual environment: `python3 -m venv venv`
4. Activate environment: `source venv/bin/activate`
5. Install dependencies: `pip install -r requirements.txt`
6. Load sample data: `python load_sample_data.py`
7. Start web UI: `streamlit run app.py`
8. Open in browser: `http://localhost:8501`

First Steps After Installation

1. Sample data is pre-loaded (3 banking engagements)
2. Go to 'Search' tab and try: 'banking cost optimization'
3. View the search results and click 'View' on a result
4. Go to 'Recommendations' tab to see AI analysis
5. Go to 'Knowledge Workflow' to walk through 9 steps
6. Upload your own engagement in 'Add Document' tab

8. FAQs & SUPPORT

Q: Do I need API keys to run Liqueo?

A: No. Liqueo works without keys using keyword search. APIs (OpenAI/Anthropic) are optional for semantic search and AI synthesis.

Q: How many documents can Liqueo handle?

A: Current version handles 100-5,000 documents efficiently on a single machine. Phase 3 adds vector database for 50,000+ documents.

Q: What file formats are supported?

A: PDF, Microsoft Word, Excel, CSV, and plain text files. PowerPoint support coming in Phase 4.

Q: Can multiple users access the same knowledge base?

A: Phase 1 (current) is single-user. Phase 5 adds multi-user with role-based access control.

Q: How long does the 9-step workflow take?

A: Typically 60-90 minutes depending on complexity. Compare to 50-70 hours without Liqueo.

Q: Where are documents stored?

A: In a .liqueo/ directory using JSON files. No database required for Phase 1.
